

EXTENDED CALENDAR MANAGEMENT FOR SAP IBP

Enhance your experience in Supply Chain Management and streamline daily logistics operations.

Benefits:

-  Perfect calendar overview
-  High data quality due to automation
-  Seamless Fiori User Experience

Unlock the Full Power of Your Planning

Solution description

The **Extended Calendar Management App** connects powerful planning functionalities and user-centric calendar orchestration. The solution empowers purchasing and distribution teams to manage periodic transports and optimized delivery cycles with SAP **Integrated Business Planning** (IBP) with unprecedented ease.

By streamlining the creation and management of calendars to meet evolving business requirements, the app ensures that the full functional scope of SAP IBP is always utilized to its maximum potential. Seamlessly embedded within **SAP Build Work Zone**, the application offers a unified entry point that integrates perfectly into the modern **Fiori user interface**, fostering a cohesive and productive workflow.

The synergy between powerful planning logic and a simplified calendar management interface allows organizations to maintain a highly responsive and transparent supply chain with ease.

- High data quality due to automation
 - By automating the creation and mapping of planning calendars to the supply chain nodes and edges, the tool minimizes manual data entry and avoids fragmented system breaks. The transition to a centralized, standardized, automated workflow ensures high data quality by preventing human error and enables easy repetition in case of sporadic extensions.
- Seamless Fiori User Experience
 - Seamlessly embedded within SAP Build Work Zone, the application offers a unified entry point that integrates perfectly into the modern Fiori user interface, fostering a cohesive and productive workflow. The streamlined naming convention facilitates planners for easier selection, better cross-functional understanding, and more precise supply chain execution.
- Robust, user empowered Supply Chain Management
 - Swift adaption to shifting market conditions require agility in supply chain planning. Besides switching planning calendars also generation of new planning calendars may be required and can be generated on the fly. By leveraging a standardized creation workflow, any new calendar is automatically structured for usage with SAP IBP, ensuring that supply chain disruptions are met with rapid, system-aligned adjustments rather than manual workarounds.
